

25th Avenue and North Avenue

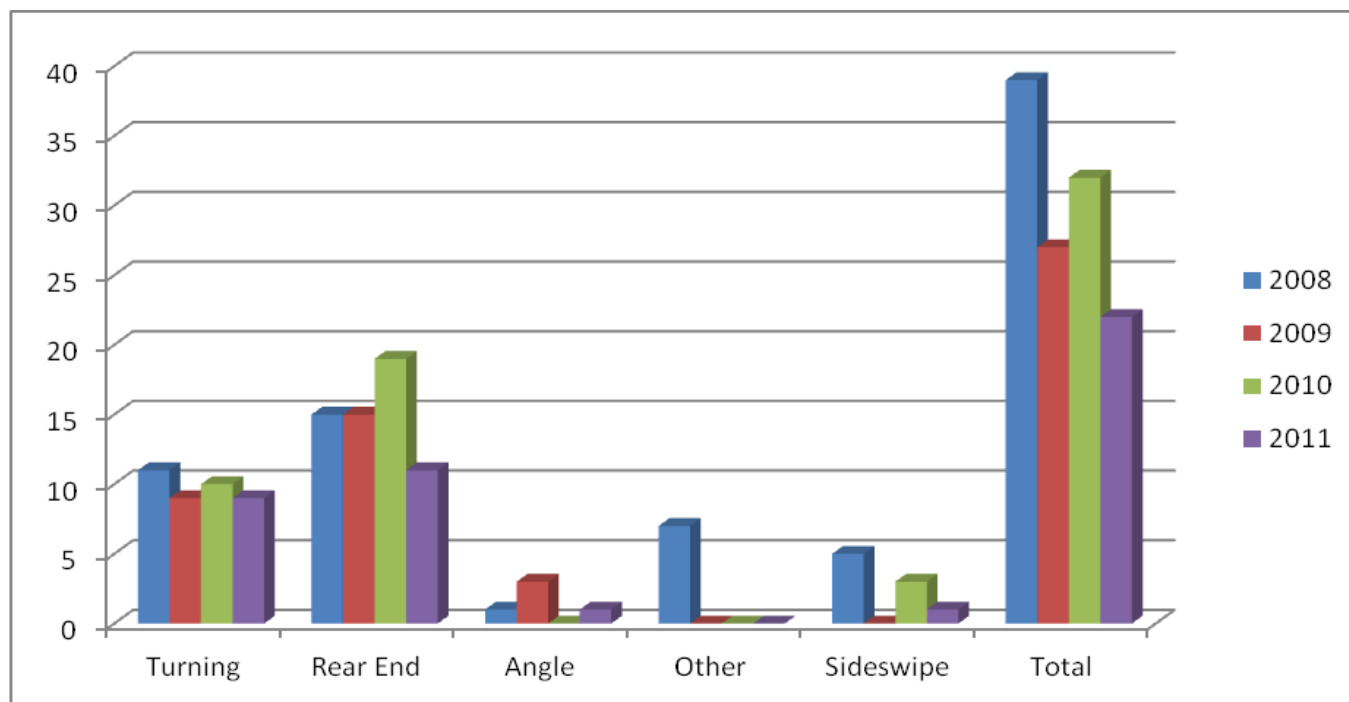

<East, West, Southbound>

RLR Crash Data and Analysis

The table and chart below show the summary of Crash data at the intersection of 25th Ave and North Ave 3 years (2008 – 2010) prior to RLR camera installation as well as 1 year post period crash data (2011).

	Turning	Rear End	Angle	Other	Sideswipe	Total
2008	11	15	1	7	5	39
2009	9	15	3	0	0	27
2010	10	19	0	0	3	32
2011	9	11	1	0	1	22

25th Ave and North Ave (Village of Melrose Park)

The results showed **Total accidents** reduced from 39 in 2008 to 22 in 2011. Thus, indicating a 43.59% decrease at this intersection.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Traffic Volume

September 2012

The traffic numbers below were obtained from the Illinois Department of Transportation website per the RLR Guideline document published by IDOT. Only ADT values were available, peak numbers were not provided.

North Ave ADT

- North of 25th Ave is 17,700
- South of 25th Ave is 16,100

25th Ave ADT

- East of North Ave is 52,800
- West of South Ave is 53,600

Summary

In 2009 over 675 people were killed and an estimated 130,000 were injured in crashes that involved red light running in the US. About half of the deaths in red light running crashes are pedestrians and occupants in other vehicles who are hit by red light runners. Studies have reported that red light cameras reduce angle and turning crashes. Because the types of crashes prevented by red light cameras tend to be more severe than rear-end crashes, research has shown there has also been a reduction in the severity of crashes.

All processes are in compliance with the RLR regulations laid out by the Illinois Department of Transportation District 1 Bureau of Traffic Operations.

The Village of **Melrose Park** received approval to install RLR cameras at the intersection of 25th Ave and North Ave in 2010.

- Date of RLR camera implementation on Eastbound: **12/17/2010**
- Date of RLR camera implementation on Westbound: **12/21/2010**
- Date of RLR camera implementation on Southbound: **12/17/2010**

There have been no Signal timing (or any other settings of Traffic Controller) changes.

The intersection of 25th Ave and North Ave is the one of the busiest and most dangerous intersections in Melrose Park. According to the Average Daily Traffic (ADT) report from IDOT, North Ave has over 50,000 cars which pass through this intersection daily. (See Tab III) The crash data also indicated a high of 39 total accidents in 2008. (See Tab II) After installing 3 RLR cameras in 2010, the number of total accidents significantly dropped to 22 evidencing a 43.59% reduction.

Numerous studies from across the country indicate decreases in red light running violations and collisions after cameras have been installed; **25th Ave and North Ave** is not an exception.
